

*"When measuring in the Kelvin Scale, the Warmer Scale increases the yellow-tones in materials and application. The Cooler scale complements the blue tones in materials and application. Neither one is correct for every application, but as designers, our dedication is to find out what Kelvin Scale is right for you and your space."*

**Elizabeth O'Neill**  
Folio Interiors

- Warm Light | Lower colour temperatures provide warm, cozy light.
- Neutral Light | A crisp and fresh ambiance.
- Cool Light | Higher colour temperatures provide cool, energizing, bright light.
